In this book a general frequency domain numerical method similar to the finite difference frequency domain FDFD technique is presented the proposed method called the multiresolution frequency domain MRFD technique is based on orthogonal battle lemarie and biorthogonal cohen daubechies feauveau CDF wavelets the objective of developing this new technique is to achieve a frequency domain scheme which exhibits improved computational efficiency figures compared to the traditional FDFD method reduced memory and simulation time requirements while retaining numerical accuracy the newly introduced MRFD scheme is successfully applied to the analysis of a number of electromagnetic problems such as computation of resonance frequencies of one and three dimensional resonators analysis of propagation characteristics of general guided wave structures and electromagnetic scattering from two dimensional dielectric objects the efficiency characteristics of MRFD techniques based on different wavelets are compared to each other and that of the FDFD method results indicate that the MRFD techniques provide substantial savings in terms of execution time and memory requirements compared to the traditional FDFD method table
